WTF is programmatic digital out-of-home?

The COVID-19 pandemic significantly changed marketers' media mix, with out-of-home being one of the channels most impacted initially. In the midst of adversity, however, digital out of home (DOOH) also found an opportunity as a conduit to people in need, providing flexibility that allowed up-to-date and accurate healthcare messages to be communicated to many people at the same time via its broadcast nature.

As the world reopens and the medium is returning to something like pre-pandemic levels in terms of foot-traffic volume and shopping, marketers are focusing on DOOH as a brand- and data-safe channel, and an increasingly essential option as the audience and privacy landscape continues to change and evolve. Furthermore, with the recent innovation of programmatic trading, DOOH can be more targeted and relevant to key audiences — a more powerful approach than ever before.

In this new WTF guide, Digiday and VIOOH dive into the elements of programmatic digital out-of-home advertising, from the basics to when and how it should be added to an integrated marketing strategy — and what sets this advertising apart. This guide highlights why the “programmatic” aspect of DOOH is crucial and how programmatic DOOH will play significant roles in advertisers' omnichannel strategies in 2021 and beyond.

What's in this WTF guide?

- [How out-of-home advertising has evolved and how programmatic has changed the channel](#)
- [How the pandemic impacted DOOH and how programmatic advertisers have responded](#)
- [The most important questions to ask when adding programmatic DOOH to the marketing mix](#)
- [A look at how programmatic DOOH can play a part in integrated, multi-channel advertising campaigns](#)
- [What media owners and buyers need from technology partners working with programmatic DOOH](#)

First things first: A quick primer on out-of-home

Out-of-home advertising is (almost) self-explanatory.

It's the advertising found outside of the household on a sign, billboard, poster in a transit station, bus shelter, store, gym, office, inside of public transit vehicles, even the top of a taxi.

That's out-of-home advertising, typically shortened to OOH.

In a digital advertising world, OOH has moved to the digital screen, right?

Exactly.

The speed and targeting limitations of traditional OOH have been eased by the advent of DOOH, which is found in many of the same places as static OOH, but on digital screens. When working with OOH, at least in its traditional static format, there is always pre-planning and the time needed to deploy a campaign. Advanced bookings for OOH are often made 60–90 days beforehand, and the format is limited in its ability to be targeted and contextual.

However, by its nature, DOOH provides flexibility for brands and media owners. Multiple brands can utilize an advertising location, and the content of the ads can be targeted to the specific surroundings or expected audience. It works fast, and it can change often.

How does programmatic tech come into play with DOOH?

In the advertising world, programmatic refers to the automated buying and selling of ad inventory using software — a supply-side platform (SSP) on the media owner's side and a demand-side platform (DSP) on the agency or brand side.

Programmatic platforms use data to allow targeting to ensure that the

right people see ads at the right time. All of this can happen in near-real-time. The result is a more efficient process and less wasteful spending. And virtually every marketer is doing it.

So, when it comes to programmatic DOOH, the data used to purchase inventory relates to the audience itself, the location of the individual

frame, and contextual triggers.

According to Gavin Wilson, Chief Revenue Officer at VIOOH, these triggers can be “things like weather, temperature or something like emission levels in the atmosphere. They can all be intertwined into the strategy that allows a DSP to decide if they're going to buy the inventory.”

Programmatic and DOOH are working together; what's different?

One of the key differences the programmatic element adds to DOOH is flexibility.

Rather than having to forward book out-of-home media for the most optimal spots, programmatic DOOH, Wilson said, “can be reactive to a trigger, or it can be proactive to a trigger. The reactivity could be that the weather is warm, so advertising ice cream is relevant, while the proactive element could be that you know there will be 60,000 fans leaving a stadium at 9 p.m., so let's make sure we're creating a tailored

message that they will see as they're leaving.”

Programmatic is also adding dynamics to the DOOH campaign that weren't there before.

As Wilson explains, “What we're finding, and an approach that marketers are really getting right, is that they might run an always-on campaign on digital screens, but then they might use programmatic for ads during optimal times — and that really gets the message to the right person.”

Consider a large sporting event, for example.

A non-programmatic digital ad in the stadium could be helpful to display for a few hours before and during the game. Programmatic digital ads could then come into play during the hour when fans are leaving the stadium, and, to make the message even more relevant, it could be tailored to the game's result, which the near-real-time trading makes possible.

“

What we're finding, and an approach that marketers are really getting right, is that they might run an always-on campaign on digital screens, but then they might use programmatic for ads during optimal times — and that really gets the message to the right person.

Gavin Wilson
Chief Revenue Officer, VIOOH

How did programmatic DOOH survive as a channel during quarantine?

The short answer: Things got tough, and then things got better for DOOH.

“We depend on people to be in the locations where our screens are,” said Mark Costa, Chief Digital Officer, North America, at JCDecaux, the world’s largest out-of-home media owner and a VIOOH partner. “They provide the eyeballs for our advertisers who are spending on those screens, whether static or digital. Obviously, the pandemic caused a disruption to where those audiences were.

“If you were looking at key areas in New York, as an example, during certain time frames of the pandemic, Times Square was basically empty,” he continued. “And certain environments like subway stations weren’t being used to the extent they usually are.”

Bottom line, empty streets and subway cars led to a reduction in spending on the channel. However, this cut didn’t just occur in the OOH channel but across advertising in general, and each media channel has had its own recovery journey.

However, for DOOH, it turned out there was a special role to play, one tied to the rise of pandemic-specific campaigns, made possible by programmatic technology and near-real-time decisioning,

“As an industry, we were the communication channel to the citizens to relay everyone’s thanks to healthcare workers, for example,” Costa said. “We saw a plethora of advertising from brands and cities to say a well-deserved thank you to them.”

Programmatic DOOH has also found a unique niche when it came to sharing information related to COVID precautions and vaccinations: “As vaccination availability started and the messaging about that became important, out-of-home was used as a vehicle to help people understand where vaccines were available and why people should get them,” said Costa. “That was another way that out-of-home rose above the surface through the pandemic.”

Is programmatic DOOH back on track for growth in 2021 and 2022?

Yes.

According to [forecasts by eMarketer](#), programmatic will make up 12.5% of all DOOH ad spending this year, and that is expected to increase to 16.4% in 2022.

At its worst, a crisis like COVID also illustrated the importance of the programmatic element of DOOH to advertisers. Helen Miall, VIOOH's Chief Marketing Officer, explains that before DOOH became available in a programmatic fashion, campaigns were typically guaranteed once they were bought far in advance, meaning advertisers were unable to pull out without heavy penalties if circumstances changed.

"If something happened like COVID, where audience changes meant that people weren't traveling, in a non-programmatic situation, the media owner is potentially within their rights to continue running that campaign. Using programmatic DOOH, the advertiser has much more flexibility to pause or adjust their campaign and reallocate budget for when the conditions are right," Miall said.

In light of recent events and how they can change advertising calendars and consumer expectations in the most dramatic ways, programmatic has given the OOH advertiser more flexibility and time to avoid commitments that they may later regret.

Source: eMarketer, August 2021

OK, programmatic DOOH is growing.

If the marketing team is going to bring it into the mix, who's involved?

Four main stakeholders involved in programmatic DOOH

Media owners

SSPs

DSPs

Agencies or brands

There are four main stakeholders involved in programmatic DOOH: Media owners, SSPs, DSPs and agencies or brands.

Media owners are equivalent to the publisher in the digital display world of advertising. The media owner is the party that owns digital screens that they want to monetize.

Media owners work with a supply-side platform (SSP), which makes the inventory available through an ad exchange, which is either through a private marketplace or an open auction.

SSPs are connected to another key player: DSPs or demand-side platforms. The DSP buys DOOH inventory on behalf of their clients, usually agencies, and sometimes brands themselves. Some DSPs specialize in DOOH, and others include different channels such as digital display or video.

And where does programmatic DOOH fit in the team's campaign planning process?

Adding programmatic DOOH to the marketing mix is a step to take at the beginning of campaign planning.

"It's one audience that's going to be experiencing ads from a brand on each channel," Miall said, "It's the same consumer, whether they're getting your ad on a mobile phone, or they're seeing a billboard in Times Square, or outside a store right before they go in to make a CPG purchase. If you have that mindset of connecting all these elements and using data intelligently across all of these channels, it naturally draws you toward programmatic out-of-home."

As the pandemic loosens its hold on people's ability to move, shop, work and play outside their homes, "I think there is a genuine time now where advertisers should consider how the outdoor narrative positively affects customers now that they're going about everyday life a little more, and how does it engage the consumer as they're moving around more in everyday life?" said Wilson at VIOOH.

Media is almost always complicated, most of the time.

What's hard when it comes to getting programmatic DOOH right?

While programmatic makes DOOH more accessible, it's still important to go into it prepared and ready to make the most of the format. According to Wilson and Miall at VIOOH, there are three essential details that marketers need to consider before jumping into programmatic DOOH.

1

To begin, marketers need to set clear objectives. "It might sound basic, but what do marketers and brands want to get from a campaign?" Wilson said. "They really need to think about what kind of audiences they want to engage with and where in the customer funnel they want to affect. Setting those clear upper- or lower-funnel goals is really important, although programmatic DOOH is effective across both."

2

Next, they need to take stock of the data that they can use to take full advantage of programmatic DOOH's contextual and targeting capabilities. "Is it location? Is it weather? Is it the time of day or the audiences? You can even use the brand's first-party data for this," said Miall.

3

Finally, programmatic DOOH is a test-and-learn scenario. Each campaign is an opportunity to measure and perfect the next. "Previously, out-of-home was bought and planned and sometimes even measured in a silo, as a stand-alone channel," Miall said. "With programmatic, you're really getting that opportunity to see how the different elements within your campaign mix and are interacting with each other, in real-time, while the campaign is running."

Getting the most out of programmatic DOOH means thinking about it as one part of an omnichannel strategy. As Wilson noted, "As a marketer or an agency, you don't plan in isolation. So how might you intertwine a programmatic outdoor strategy alongside any other channel? And then how do you measure that and make sure that you're really getting the best out of all those media channels? I think that is really essential when you're considering programmatic outdoor: Where does it sit in that whole customer influence sphere?"

What's going to be easier to accomplish once DOOH is in the mix?

Before OOH went digital, it was often planned in a siloed fashion, away from other channels. At the very most, OOH was also useful to amplify other channels by including a website URL to visit or a QR code to scan.

However, the digitization of out-of-home made it easier to integrate DOOH campaigns with other channels, and the programmatic element makes that integration even more sophisticated and targeted and capable of omnichannel measurement.

According to Miall at VIOOH, "Where we've seen particular success, and where out-of-home tends to align very strongly, is with mobile and social. Whether it's using mobile data to help with audience targeting, or from an execution perspective, having a call-to-action on the out-of-home screen that is then driving the mobile and social activity."

Wilson adds, "As the consumer moves around, their mobile goes with them. So there's a really good synergy there between population movement and the outdoor screens that they're seeing."

As technology advances, marketers can use programmatic DOOH as a vital part of a highly integrated

campaign. Recent examples of this include sequential campaigns, in which targeted mobile ads are run at peak commuting hours, starting with, for instance, ads on phones during the times when people are sitting on trains looking through their favorite feeds and pages. Then, related ads appear on digital screens at the train stations when they arrive so that the same people will experience an integrated campaign at targeted times.

An integrated, omnichannel campaign like this can even be tied to in-store shopping and advertising. For example, a campaign that VIOOH was involved in [for Nespresso](#) used in-store footfall data to trigger creative on screens in the store's vicinity to show things like the current queue time and special offers to make store visits more predictable and consistent.

A campaign like this utilizing programmatic DOOH as a piece of the puzzle allows brands to hone in on what is explicitly driving the KPIs they have in mind and to adjust and optimize accordingly. "I think as more and more brands do things like that, they realize the channel can be really intelligently planned with other channels," Wilson says. "I'm sure other channels will appear as being really positive in that sequential narrative over time as well."

What should media owners and marketers look for in their technology partners?

According to Costa at JCDecaux, for media owners, one of the essential features of an SSP is how it helps them effectively manage their inventory and how it is sold.

“The platform needs to help us understand the inventory we have available, how best it’s being sold, and how we can best optimize it from an occupancy and yield perspective,” Costa said. “It should help streamline our interaction with the buying community or the demand side, making it easier to buy inventory.”

A key piece of this system, he said, is the number and type of DSPs to which they are connected. The greater the number, the easier it is for an agency or brand to find the media owner’s inventory. Then there are omnichannel DSPs, which focus on multiple media channels such as display, mobile and DOOH, while others focus only on DOOH. Some SSPs, like VIOOH, are DSP agnostic, so a media owner’s inventory is made available even to buyers who might not have programmatic DOOH on their radar.

Once the inventory is discoverable, SSPs can show their value through the deal management capabilities. Costa provided a few examples: “How does the platform help me create and publish my deals, help others discover my deals and activate those deals? How do I create packages? How do I leverage data to create those packages? How do I fulfill reporting capabilities and analytics around programmatic trades and executions? These are all things that are important on the media owner’s side, and the SSP plays a major role in them.”

For brands and agencies looking to play in the programmatic DOOH space, Costa suggested looking at the capabilities of their existing DSPs when it comes to the channel, a critical factor in efficiently integrating DOOH into an omnichannel strategy. On the other side, DOOH-focused buying platforms often have channel-specific capabilities available, and they shouldn’t be discounted for streamlining alone.

“Buyers should be looking for a DSP platform that helps them execute audience-based buys, where the audiences are specific to out-of-home because the data used in this channel doesn’t translate over to cookies and mobile IDs,” Costa explains. An ideal DSP for programmatic DOOH should make it easy to activate campaigns, holistically discover inventory and report results.

Last question: Why now — why focus on programmatic DOOH in 2021 and 2022?

It's a pivotal time to contemplate programmatic DOOH because of the challenges that other channels face, and will face in the near future, regarding data privacy restrictions and the end of third-party cookies. One big difference: Programmatic DOOH will not be impacted by these challenges as a broadcast media format.

As JCDecaux's Costa explains, "We're moving from a personalized approach in data-driven marketing to a mass-personalized approach. Think about cohorts as Google's solution to cookies. What many people don't realize is that mass personalization is what out-of-home has always been based on."

And the market is responding to these changes by paying more attention to programmatic DOOH. Within the last year, many of the major omnichannel DSPs, including The Trade Desk, Yahoo and MediaMath, [have announced](#) the

addition of programmatic DOOH, or heavier investments in the channel, to their platforms. "That's a big market shift," Wilson said, "because, without that, agencies and brands using those DSPs would historically plan their campaigns on display, video and mobile channels only."

The shift, as Wilson noted, is underway. Programmatic DOOH has emerged from a time of quarantine as one more pillar in the omnichannel marketing mix, and data tells us it's a growth channel. For marketers now learning what programmatic in the digital out-of-home approach can do, advantages such as dynamic, flexible, contextual and privacy-forward ways to reach people in the places where they're working, playing and living, are driving that spend. At the close of 2021, and at the start of a year in which out-of-home is increasingly a part of lifestyles again, programmatic DOOH is at the heart of advertising's recovery story.

About VIOOH

VIOOH is a leading premium global digital out of home marketplace.

VIOOH launched in 2018. From our headquarters in London, we connect media buyers and sellers across the globe using a custom, full-stack IT platform. We've built partnership agreements with more than 30 DSPs, and programmatic access to premium OOH inventory.

Inside VIOOH We have a team of experts with an absolute treasure-trove of expertise acquired at the world's leading OOH media and tech companies. Every last one of us is passionate about driving innovation in the OOH sector. We've achieved a lot since 2018, but we know we've only scratched the surface in this rapidly-evolving space.

No-one is better placed than VIOOH to serve media owners and media buyers. We know that owners want to maximise the commercial effectiveness of their assets. And that buyers want to get absolute maximum ROI. These interests are entirely compatible, because advertising that gets results works for everyone.

Financially backed by the world's #1 out of home company JCDecaux, VIOOH offers an integrated platform to provide automation and programmatic trading for the benefit of the whole sector, incorporating both JCDecaux and third party media sellers, as well as buyers.

The platform provides advertisers and agencies with an enhanced value proposition for Out-of-Home, allowing audience-led planning and trading including the ability to plan the OOH digital screen alongside the mobile screen. VIOOH is able to incorporate many data sources and relies on machine learning algorithms to improve the targeting and the effectiveness of the advertising campaigns. Out-of-Home being by nature a "one to many" media, VIOOH is almost natively GDPR compliant and therefore will always comply strictly with personal data protection rules to safeguard citizens and users.

VIOOH currently trades programmatically in 13 markets globally, including the US, Australia and UK.
